### Introduction

I am really very much disappointed in the American Medical Association as their members are more concerned with their profits than they are about the health of the populace. However, it is easy to understand as the members have made it such that they obtain the greatest profit from the mostly unnecessary surgeries that they perform. This article does not address the control that the AMA has over all aspects of what is their greatest money-maker: surgery for cancer. Instead, this article is about how you may learn to take control of your own efforts at maintaining your health and not be subject to the bugaboo cancer. It is not the fact that cancer does occur, it is the fact that you ignore it until the cancer becomes a problem!

### Background

The AMA has had a stranglehold upon medical education for over 100 years now. Mostly through very stifling political action, very slanted medical education and a very tight grip on the approved treatment therapies. The AMA has become the dictator of what comprises medical treatment and who is able to treat the sick patient in the USA. So much for the home of the brave and the land of the free, LOL.

The AMA has effectively brainwashed the public of the USA to the effect that cancer is a deadly disease that only the AMA is capable of treating. This is of course complete hogwash, as the saying goes! The AMA has spent considerable time and effort in convincing the American public that cancer is a disease. However, the actual truth of the matter is that cancer is a normal occurrence and thus cancer is not per se, a disease! Cancer is a normal activity of newly

“not-self” cellular activity. Thus in fact cancer is not a disease as such but a normal aberration of cellular activity. The human body is readily able to recognize “self” from “not-self” cells. The various protein, protein-carbohydrate and protein-lipid compounds residing in the surface molecules of the cellular membrane apparatus of all living cellular external membranes is similar but not exactly the same in all peoples and animals. However, it is in the different structural and metabolic elements in the cellular membrane apparatus due to natural selection that determines the various membrane elements involved in the various serotypes that exist in the general populations of all animate organisms. If you may be interested in this subject, there is a vast amount of information concerning this subject that may be readily found online. Here is also a very useful link regarding the subject of the various immune elements at work: <https://www.niaid.nih.gov/research/immune-cells>.

The reasons that various normal body tissue cells move from being “self” to becoming newly “not-self” cellular tissue is open to debate and is not truly known with certainty at this time. The tissue monocytes, macrophages, blood eosinophiles, dendritic cells and Natural Killer cells all play a very important part in keeping all invasive elements and cancer cells at bay! The change of various tissue cells from a “self” cell to a “not-self” cell is the result of an event which in some manner changes aspects within the nucleus of the affected cell(s). The cause of this change is still open to debate. However, this change in some manner disrupts the normal course of events in the life of the cell. However, the result of this change is the production of a “not-self” cell line active within the host. It is an unfortunate everyday event in the life of every human being and in fact animal on the planet.

A “something” causes the events that occur during the normal everyday replication of cells somewhere in the body in the many types of cells within the body to deviate from the normal chain of events that then results in a cell line type that we humans call a cancer. In the course of what is a normal everyday event in the life of the organism, the macrophages and other types of immune cells usually adequately deal with these deviate cells by killing them and ridding the body of the left-over debris. Again, this is a normal everyday event within the body of the organism and in the life of any organism.

### Cancer and the “Something”

What is a cancer is not an unknown entity. The relevant tissue involved is in a state that makes an everyday normal cell into a cell that no longer is part on the body whole. An event(s) has occurred that changes the metabolism of the new “not-self” cell to skew onto the course of becoming a parasitic entity feeding on the compounds supplied by normal body metabolism and distribution networks. What is interfering with a normal course of events to move a few “not-self” cells into a cancer? Cancer is not known as a disease that is passed around like the common cold (a virus) or diptheria (a bacterium). However, it is or rather can be passed around! This is only 1 manner in which a cancer may develop within the body. I know that it is difficult to wrap your head around the fact that cancer is passed from one person to another as a form of energy disruption. The passing over is usually to someone that is in close contact, i.e. within 6 feet or so, with the person that has an active cancer forming or growing. This fact is a normal course of events as people seem to pass around disease much like thoughts. Again, this is a normal body-field course of events - people trade around body-field imbalances in order to dilute any possible negative events from occurring within their own body-field. This sets the stage for the development of a “disease”. Yes, people also trade around thoughts and this is a subject for another possible article. This transfer of energy is then diluted by the event of a passage of the negative influential energy packet from one person to another. If the person impinged upon is strong in the energy balance created by the entirety of their Enteric Nervous System components, the “negative” energy will be warded and will not have a deleterious effect upon the person in proximity to an “ill” person. The “negative” energy thought or body pattern that is being passed around will dissipate as it will not be able to anchor in a weakend body-field. The key idea to note is the aspect of an anchoring of ideation,

whether of a positive or negative type. For this discussion, the focus is in the nature of a “negative” energy anchoring within the body-field of a human being.

What is being revealed here at this time is that the negative energy may be transferred from one person to another as a disruption in a body-field component. If the body energy disruption persists in a sufficient amount of time at the same locus as the causal event in the original transferee, then the same symptoms will eventually manifest as cellular disruption at the same general locus where “not-self” cells will eventually manifest in the person to which the “negative” energy was passed. Is this not the pits of despair? You may get cancer as a normal variance of normal cellular metabolism and also as negative energy passed to you from another person. This seems to be the stuff of science fiction novels but it is in fact an everyday occurrence. It is imperative that you keep your energetic body-field “clean” and in peak condition. The issue then is to be able to learn to be in touch with your own body-field components and thus also to be able to recognize any disruption of the normal course of events in those components. Alas, such training and information is not taught today as it is deemed as superstition. This is a political decision by those that want to control as much of your behavior and training as possible simply because they want to derive as much income from the deleterious “event” as possible.

One of the reasons that cancer is so invasive is that the cancer cells seem to be released from the growth constraints put upon the normal cells of the body. This is the reason that cancers form masses. Cancer cells seem also to not have the same constraints as normal tissue cells in regard to growth in ordered patterns according to the tissue involved. Cancer cells seem to be able to grow hither and yon all over the place in patternless lumpy masses. This fact tends to make mass removal by surgery easier. Removal by surgery is fine but the negative energy component must also be removed. This is where it gets weird to the thought of most people. This is because they are not educated in what comprises normal body-field events.

### Body-field

The body-field generated by the sum of the metabolism of your body is more or less in the overall shape of a 3-D ellipse encompassing and extending a bit in all directions from the midline of your physical body, arms and legs. This body-field is created by

your Enteric Nervous System elements as well as all the various tissues of the entire cellular structure of your physical body. It is then a task for you to become aware of and monitor the energetic state of your entire body-field. As you learn to do this daily monitoring you will then also become aware of the state of the various tissues of your body. You will be able to detect any developing “not-self” cells/tissues or masses. Learn to direct the various tissue components responsible for riding the body of any “not-self” cells/tissue masses and maintain your body at peak efficiency. This task is not difficult to learn but it does require a bit of training. This training encompasses what is usually known as a type of meditation. The information necessary to know was formerly taught as a normal part of the educational process of so called “enlightened” peoples. This was usually accomplished by the female members of the family. This information has now been usurped by the AMA so that they may profit from your ignorance! Those in “charge” of science are also very ignorant of much of what constitutes actual reality. This is by very conscious and very deliberate design - if I can not see it, it does not exist! Also, the role of the Universal Catholic Church is in cahoots with the role of the AMA is in cahoots with the role of the “scientists” in keeping you the seeking person on the straight and narrow in ideation so that they can determine how best to influence your behavior in order to obtain the greatest profit from your many endeavors in daily living. Please decide to take back your greatest legacy - your healthy Body!
