We see in the world that there is many things is world that harms our environment as well as Land water like Plastic, Rubber, Rack sin, Thermo Cole, glass, fiver and other things also .All is made by human when all new products lunch then we fell very happy and we made new –new factories and we utilize the things like any things .and between 50 years it is a big problem for the world. We can see it in the corner of the cities, bank of the rivers, and sea tanks, lakes, fields and many other places .Our Bihar Government take very good steps to band plastic bags .But it is not enough to control pollutions .By this action only poor people affected and they punish by local polish and municipality workers. They loss their purchase things and given fine it is very bad for poor peoples. If we want to stop pollutions by plastic then we must ban like plastic bottle, pipe, suitcase, computer case, water tanks, electric utensils, water utensils, toilets utensils, pens glass plates and home utensils and any other many kind of utensils .we must ban in every things made by plastic or plastic used or mixed in other materials.

For Plastic we can divide in two parts

- Soft plastics
- Hard plastics

Soft Plastics is used as polo thin bags, ropes, covers, plastic coated books papers etc.

1. Hard Plastics is used in pens, glass plates, suitcase, bottles, corks, pipe, tanks, fiver, playing items, Medicals items etc.
2. Things swimming and non swimming in water
3. Plastic, thermo Cole, plastic coated paper, and plastic coated cloths are swimming in water.
4. Rubber, rack sin, glass, fiver, hard plastic is non -swimming items its goes under the water it we cannot see. It's also disturbed environments and water creatures.
5. Things which create Air pollutions

Every things made by people in industries it has special smell that harm human and environment because when we bring any new items then we fell uneasiness and after some time we are habituated by the smell and we not feel uneasiness.

When we plough our fields then I found many items in our fields like rack sin, rubber sleepers, gutka covers polo thin rope water bottles corks thermo Cole pens glass and fiver oil pouch lassie pouch spices pouch chips pouch etc.

My advice is for the all government that if you want to ban the plastic items you must ban in all things above mention items, why only small industries suffer and only poor people suffer by law? And arrange alternative needs of the people or recycling of plastic goods and keep safely all waste products. To clean the environments we must not through it and burn it.
