A new therapeutic method for the Regenerative Ophthalmic and General Medicine.

Using an homotoxicological pharmaceutical blend therapy through retrobulbar injections to “reset” the “body’ programming” deteriorated by environmental life’ conditions completely and worsly changed from the first “original programming” in the legendary “Eden” where through the “environmental conditions”, in which life is then started and “humans” have been originally created and programmed, that were completely different from to day environmental planet-earth conditions completely deteriorated, reason for which the human autologous stem cells, to day, do not work any more completely, automatically repairing and regenerating damaged tissues and organs as should be by their original programming and mission because practically now we are subjected to completely modified and deteriorated biological situations.

The author reports his experience derived from first autologous retinal stem cells transplants (in the world) through the explantation from “Marrow-Bone” (through the Hip) and re-implantation into the “retrobulbar fat of the Eye” started 13 years ago at February 2008 in the public hospital “Eduardus Krankenhaus” in Koln (Cologne) in Germany with the authorization and control of the German Ministry of Health.

The aim of this work is to define a new concept of: “Re-informational therapy” for “regenerative ophthalmic and whole body’ medicine” using a system for “reformatting” pathological eye tis-

suess as retina, uvea, cornea and the optic nerve and also the body tissues through the therapeutical “re-regulation” of the affected tissues of the eye and the body no more capable to spontaneously “self-regulate”, as it was in the past, its normal biological functions.

Author reports the capability to stimulate the regeneration not only of autologous eye stem cells but also, of the “totipotent” autologous stem cells having “unwillingly” cured, during practice, also anosmia cases, acoustic nerve deficiency cases, arthritis, multiple sclerosis and dry-eye-syndromes and so on and incidentally also, as example, some cases of black hair spontaneous re-growth in some 70’/80’ years old patients, while he was committed to cure “only” optic nerve and retina affected by wet and dry maculopathies and other eye’ pathologies.

These unwanted positive results have forced me to try to understand the inner, not yet known, biological mechanism that could explain this surprising spontaneous body behavior and after a deep and extensive study i could conclude that the following “4 principles” regulate autologous stem cells regeneration because, at the moment, they are the only logic possible explanations for the independent happened activity of stem cells.

I would here, also, better define the “complete real mechanism of transportation and storage” of “biological infos” through the “water memory phenomenon” giving a definition of the whole “computer like-biological program” that represents: the “real life operating mechanism” into the “matrix” of the “multiverso” that is our: “multidimensional - olografic - universe”.

At this point to understand the phenomenon it is important to introduce the whole concept of water memory and the clusters, a cluster is a minimal group of water molecules binded by hydrogen bonds in pentagonal-like-shaped structures and even more complex cage-like-shaped structures where water' molecules are ordered in a sequential like structure as a computer program, they may contain an infinitesimal solute trace of homeopathic chemistries and even at greater dilution also if there it is no more physical trace or presence of the solute, the solution will maintain or even strengthening its therapeutic efficacy due to the "electromagnetic-information" that is still spread into the "body' water' memory" that retains this "electromagnetic-information".

My discover is that the "place" where these "electromagnetic-informations" are physically stored is into: the "active ice micro-crystal" circulating into the "blood, lymphatic and endocellular fluids", "imprinted" on the "crystal 'symmetrical planes" structure that belongs to every physical crystal' structure to store the electromagnetic informations as it happens in a computer where the "infos" are stored into a "silicon' crystal microchip".

To a superficial first approach, could seem impossible that "water-ice-crystals" could survive without melting into a body (from 36 till 42 centigrades range), but we should first answer to some questions, as example: how can be possible to survive in a desert at 50 - 60 centigrades?, where we can resist for some hours without that our body' temperature will rise over 37/38 boiling to equate external temperature, as physically logic, without breathing intensively (like a dog) nor having, apart sweating, no system to reduce, the external strong heat, only an: "inside refrigerant system" can explain it.

In fact biological life would end if our body' fluids would "over-heat" or completely "freeze" in very severe temperature' conditions.

The "symmetrical planes of the ice micro-crystals" do act as a "silicon crystal in a micro-chip" of an operating computer system, where "water memory system infos" are recorded and stored to be transported into the body' fluids and activate all enzymatic, hormonal and biological life' mechanisms.

Hence - life - is an - "informational' system"- that works like a computer where the "software" is stored into the "ice-micro-crystals-symmetrical-planes" (as into the "silicon-micro-crystal"),

where the "biological chemical-electromagnetic infos" circulate into the body' fluids, allowing all biological hormonal enzymatic and regulation' systems and functions to circulate transferring the biological informations and make the body work correctly following the stored program sequence.

On the contrary, death will occur for overheating or complete freezing of body' tissues by the clusters and ice-micro-crystals complete melting or frozen, by which "info circulation", that means "life", will be blocked and completely stopped with the disappearing of stored database and therefore, all biological informations and programs too.

While it is still possible to survive after a partial freezing, under peculiar circumstances, given that "micro-ice-microcrystals" could still circulate and move into the body' fluids, again, after having been reactivated and reached a suitable temperature compatible with biological life' conditions.

At contrary it is impossible to heal from excessive body temperature around and beyond + 50 centigrades for ice-micro-crystals complete melting with the stored infos completely lost.

An experiment that definitively confirms how the correct biological-informations is the "driving force" of all biological systems in nature, it is the experiment that i repeated several times many years ago using some plants: two identical pots, filled with homogeneous soil, with one bean' seed in each pot, coming from the same plant, identical for weight, shape, size and color with identical exposure to light.

In the first pot (n.1) a liquid chlorophyll (with low water dilution) was used.

In the second pot (n.2) water with chlorophyll in "homeopathic dilution" after "succussion" or SKA (sequential kinetic activation) or dynamization was used to create "informed water" through the micro-ice-crystals and clusters storing the chlorophyll information (biological natural mechanism).

In conclusion the plant in the second pot grew much faster and lush than that in the first pot (n.1).

My retrobulbar injections therapy takes advantage of these - 4 - principles:

- 1) Principle: Chemical-electromagnetic mechanism of "information" into "ice-micro-crystals" induces an "informational active regeneration of stem cells". my omotoxicological cocktails with the correct natural pharmacological informations directly put into "retrobulbar fat of the eye", one of "reachest place" of stem cells in the body, do this work.
- 2) Principle: "Trophic-induction" = the ability of a substance to direct properly the cellular regeneration towards a damaged/diseased tissue also through the informations provided by "organotherapeutic messangers" = purified minimal extracts of tissues derived from "pork-organs" that exhibit more "affinities" with human' tissues" confirming the "homeopathic principle": "similis similibus curantur" = similar treatment for similar creatures.
- 3) Principle: "Positive-trophism" = also in case of shortage on the spot of stem cells in one specific organ/tissue, "it" allows the stem cells to reach that organ/tissue damaged also if the stem cells reactivated are far from target organ/tissue, especially through blood, lymph, and intracellular fluids, this is led by a "rescue program" that spontaneously activates through bio-chemical "allarm mediators" circulating in the body' fluids (the cytokine' mechanism). This last principle has been defined as a "bystander-reaction" by heine in 1993 and after weiner and mayer in 1996 identified as a: "primum movens" (= first action) as a consequence of an "inflammatory reaction" for any organ/tissue' damage both for a pathological process or to repair a mechanical or chemical-toxic damage, the stem cells will be consequently activated.
- 4) Principle: "Regenerative-independency" when stem cells will activate the "totipotent" ones that will not necessarily reach "only" the targeted organ/tissue for which therapy was prepared but "totipotentiality" will give "them" an "autonomous independent behavior" they will go where "they-think" could be a "need" or to "restore" a possible "biological balance" that we cannot explain with "our to-day logic" like the un-expected "black hair re-growths" that was not, (for me), a "real necessity", but, that in any case, did happen, a possible explanation could be in "chinese natural medicine" principles as a bio-energetic "chi" re-equilibration in the main-body-channels.

These 4 main principles promote the "regenerative self-healing stem cells' mechanism" present in all biological-entities represent-

ing the best and more safe way of "potential healing" by "self-regulating" without collateral effects due to "respect of the body natural physiology".

Last but not the least, through the retrobulbar area i have a "lucky" direct communication with the brain and spine by the favorable anatomical circumstance to overcame the: "blood-brain and spine-barrier" through the optic nerve and vessels by "skull optical channel" that allows the passage of the "biological-infos" in the "cephalus-spinal liquid" that wet and nourish the brain and spine and optical nerve and eye too, the "liquid" will flows like a fall from "optic-channel" to the brain-spine and to all organs following our "metameric' body distribution".
