Human lives in two worlds (Figure 1) – Materialistic World and Spiritual World. The Materialistic World is governed by the Materialistic Physics and the Spiritual World is governed by the Spiritual Physics (Theophysics) (Figure 1) [1].

The science of Physics deals with matter and energy. In materialistic physics, matter is everything that we see around us – buildings, plants etc. and the energy is the electrical energy, magnetic energy, nuclear energy etc. In spiritual physics, the matter is the human mind and the energy is the electromagnetic energy particles of the human mind (2) (we name these particles - “Humanotron”) and the God’s energy particle – we name these particles “Theotron” or the “Soul”. The God particle for nonliving matter is the Higgs-Boson particle but the God particle for the living matter (human) is the Theotron or Soul.

The Universe is covered like an umbrella by God’s Field and in it play the God’s energy particle – the Theotron or the Soul.

Human life is the game of interaction between the electromagnetic energy particle of the human mind (Humanotron) and the God’s energy particle (Theotron or Soul).
